INTRODUCTION

Healthcare interoperability specialist and senior integration engineer: six years of NHS HL7 v2 and FHIR on InterSystems IRIS, HealthShare and Ensemble, and since April 2026 DICOM and clinical AI across Europe.

WORK EXPERIENCE

Senior Customer Deployment Specialist **Apr 2026 – Present**
Blackford *Remote*

- Led seven Blackford Platform (Philips AI Manager) and clinical app deployments for Philips and GE Healthcare clients in Italy, Germany, Norway and Poland as sole engineer, from requirements to post-implementation review.
- Integrated PACS, RIS and EMR over DICOM and HL7 v2, auto-forwarding studies, retrieving priors and selecting what reached each clinical application, so doctors could review AI results in BART before they returned to PACS.
- Configured chest X-ray, mammography and CT apps across many files on Ubuntu and GCP, one air-gapped in Norway. Complex troubleshooting included decompiling a .dll and coding study XML around a relevancy rule fault.

Senior Integration Engineer **Apr 2025 – Apr 2026**
Synanetics *Remote*

- Sole developer and architect of DocAssure, an IRIS for Health document framework live at Sheffield Children's and the base for UHDB, routing clinical documents to the DMS, GP practices over NHS MESH, print or email.
- Architected integrations for six of the 20+ NHS trusts Synanetics supports, including an ePR migration and the DrDoctor portal. Led two Interweave FHIR projects, one a NodeJS Liquidlogic ETL pipeline handling deletions.

Integration Engineer **Feb 2023 – Apr 2025**
Synanetics *Remote*

- Built Warrington and Halton's paperless ePhlebotomy interfaces: MOLIS to WASP online booking, with SPINE PDS lookups via Lorenzo PAS. Nearly 7,000 patient appointments were booked in just over four months of the pilot.
- Developed multi-system HL7 v2 integrations with NHS SPINE PDS lookups, document interfaces to eDMS, MESH and shared care records, and PAS feeds covering referrals, appointments, admissions, transfers and discharges.

Development Specialist **Oct 2021 – Feb 2023**
Bedfordshire Hospitals: led HealthShare projects, owned P1 issues and board communication; wrote TIE procedures.

Senior Integration and Development Engineer **Apr 2021 – Oct 2021**
Luton and Dunstable Hospital: created a NACS snapshot to HL7 solution for the EPR; led supplier and trust meetings.

Integration and Development Technician **Sep 2019 – Apr 2021**
Luton and Dunstable Hospital: ran HealthShare engine checks and resolved data-quality issues with system admins.

PROJECTS AND AWARDS

Aperture: IRIS management portal for productions and FHIR, no app server: InterSystems contest, 2nd of 37 entries.
Shutter: IRIS AI Hub agents propose fixes for failed HL7 messages, a gate checks, a person approves: contest entry.
mxsalata.com: my website, built with Astro, no trackers or cookies: my projects, writing and Aperture's online demo.

SKILLS

Standards: HL7 v2, FHIR STU3/R4, DICOM, ITK, NHS MESH, NHS SPINE, JSON, SSL/TLS; ISO 27001/9001 work.
Integration engines: InterSystems IRIS, HealthShare, Ensemble, Orion Rhapsody, Mirth Connect, Interweave.
Infrastructure: Docker Compose, Linux (Ubuntu), Windows Server, Google Cloud (IAP, buckets, firewalls, permissions), Cloudflare Workers, nginx, Keycloak SSO, OIDC, LDAP, SSH, certificates, CUDA, Git, BitBucket, Jira.
Tools: Objectscript, Transact-SQL, PostgreSQL, Python, Typescript, NodeJS, HTML, MicroDICOM, DCMTK, AI agents.
