WORK EXPERIENCE

Bedfordshire Hospitals **Oct. 2021 – Present**

Development Specialist [same role, new title] *Working Remotely*

- Led and managed various projects ranging in complexity, from development of critical interface fixes, to deployment of specialised systems requiring interfaces from the LIMS and EPR systems for both, in-patients and out-patients.
- Independently conducted investigations of complex live BAU issues affecting patients, or clinical staff. Prioritised problems by conducting dynamic risk assessments. Devised solutions and implemented them alongside projects.
- Responsible for integration response when P1 incidents occur. Analysed impact on business function, provided management with advice and potential solutions. Worked with colleagues and suppliers to implement solutions.
- Established and comprehensively documented interface error-handling, and TIE maintenance procedures where each step contains context and enough detail for entry-level employees to confidently perform these checks.

Luton and Dunstable Hospital **Apr. 2021 – Oct. 2021**

Senior Integration and Development Engineer *Cranfield Office*

- Designed, developed and deployed a solution capturing GP and GP Practice NACS information in a SQL snapshot from an external database, transforming the snapshot to custom HL7 messages forwarded to our EPR system.
- Independently trained and managed two entry-level employees. Accommodated them with a dynamic teaching approach. Taught both recruits how to: operate the TIE, version control their work, handle sensitive information.
- Led meetings with application suppliers to establish interface specifications. Presented deployment and roll-back plans to internal change approval board. Organised and supervised sanity, functionality, and end-to-end testing.

Luton and Dunstable Hospital **Sep. 2019 – Apr. 2021**

Integration and Development Technician *Luton Hospital*

- Performed integration engine maintenance checks on a bi-weekly schedule consisting of checking the server health and monitoring our numerous interfaces for any TCP disconnections or failed messages to our downstream systems.
- Investigated and uncovered various data quality and design-related issues. Presented complex cases to my seniors. Resolved data-quality issues on a case-by-case basis by working closely working with our system administrators.

Luton and Dunstable Hospital **Nov. 2018 – Apr. 2020**

Sterile Services Technician [part time] *Luton Hospital*

- Responsible for the decontamination, inspection and assembly of surgical instruments ranging from heavy drill sets to fragile endoscopes, this involved working against short deadlines due to the scarcity of these instruments.

EDUCATION

Newman 6th Form College **Sep. 2017 – Jun. 2019**

Achieved 3 A-levels in Computer Science, Mathematics and Physics. *Luton Academy*

SKILLS & QUALIFICATIONS

Extensive knowledge and experience: InterSystems Ensemble, IRIS, Objectscript; HL7 v2; Transact-SQL; JSON; Mercurial.
Courses: InterSystems: Developing with InterSystems Objects and SQL; **HL7UK**: DICOM/HL7/IHE standards overview.
Some knowledge or experience: Mirth; Orion Rhapsody; REST API; FHIR; ITK; CDA; HTML; Python; Git.
